

How does it work?

This article answers every question that comes to your mind!

SWISSTRAFFIC.ai is a unique, globally trusted service, providing the super-accurate traffic data from videos either from drones with stabilization or from standard cameras. It is capable of measuring a wide range of advanced traffic parameters for each object thanks to the trajectory-based approach: analysing current speed, acceleration/deceleration due to georegistration, classification up to 16 categories, safety analysis (measuring time to collision, heavy braking or risky situations), configurable gate counting including O/D matrix, travel and occupancy times, headways, gap time & time to follow analysis, turning movement counts, heatmaps/grid maps, traffic and action regions, capacity estimations, various export functions and statistics (you can also visualize your data and export this visualization) and many more features accessible via SWISSTRAFFIC.ai Viewer.

SWISSTRAFFIC.ai service is very easy to use with almost nothing. Capture your video, create a SWISSTRAFFIC.ai account, choose between SCOUT or DRONE platform, upload your video in the correct format, install the SWISSTRAFFIC.ai Viewer, have a coffee and get the results for traffic analysis!

And what about the costs? With SWISSTRAFFIC.ai service you pay only for hours of the video that you upload to our SWISSTRAFFIC.ai platform. From each video we will give you a free five minutes sample to help you decide if you want a full analysis. We also give you three credits to get started with our services!
